#### Whitech kiosks and software now offer Photo Movie feature

**Whitech Software Solutions U.S.A.**, West New York, N.J., USA, now offers a new Photo Movies feature in its Photo.Teller kiosks, Home.Ordering, and Net.Order photographic software applications. Photo Movies allows consumers to take their favorite photos and turn them automatically into a movie presentation with special effects and music to view on VCD or DVD.

**Korosh Delnawaz**, president of Whitech U.S.A. said, "We are pleased to make available this exciting new feature on our Photo.Teller range of products. We are continuously looking to add new features that appeal to both retailers and their customers. Photo Movies is another fun and creative service that adds value to the Photo.Teller range of products."

Customers can either choose the express movie option, which intelligently selects images to create the movie, or they can select their own images to use in the presentation. Additionally, customers can select the theme of their presentation from a range of different styles, such as romance, parties, and more. They can also choose the type of backing music they prefer. Photo Movies utilize the licensed muvee autoProducer 5 application, which allows consumers to turn their favorite pictures into own creative movie.
